

DANA BAY COUNCIL RAPID ASSESSMENT OF ADOLESCENT SEXUAL AND REPRODUCTIVE HEALTH (ASRHR)

JANUARY 2022

FACT SHEET

This fact sheet is a summary of the findings of the ASRHR Rapid Assessment undertaken in Dana Bay Council as part of an eight-country study¹ from November 2019 to December 2020. The research aims to strengthen youth-led and focused efforts to promote ASRHR through gender and youth-responsive local governance. Gender Links South Africa conducted the study in 29 Centers of Excellence for Gender in Local Government.² In Dana Bay, the study covered 1 clinic; 40 respondents: 50% young women and 50% young men (see table overleaf). This fact sheet should be read together with the South Africa and the Southern Africa ASRHR Rapid Assessment research pamphlets. Key findings include:

Accessibility

- The majority (88%) percent of respondents reported being within 10 km of a clinic.
- Responses to whether the clinic opens after school was very high at 90%.
- None of the respondents, said that the clinic opens during weekends.
- Eighty-three percent of respondents said that the clinic had a comfortable waiting area.
- The clinic does not charge fees for its services.

Quality of care

- The majority (97%) of respondents said they were treated with respect.

- Ninety-three percent of young people indicated that there was privacy at the clinic.
- Ninety-seven percent of respondents said they were treated with confidentiality.
- Only half (50%) of respondents said that clinic did not require their parents to be present.
- The majority (90%) of young people indicated that health workers spent sufficient time with them.
- Eighty-seven percent of young people said they received appropriate information. Availability of information is a key component of ASRHR that gives young people a #VoiceandChoice.

Sexual and reproductive health services

- A third of young people requested contraceptives. The majority (92%) of those who requested contraceptives received them. Access to contraceptives is key to ensure that ASRH is prioritised.
- At 5%, the overall demand for male circumcision, which has been shown to reduce the spread of HIV and AIDS, is relatively low. It is encouraging that all of those who requested male circumcision received an appointment.
- Only 3% of respondents requested an HIV test. All (100%) of those who asked for this test received it.
- A higher proportion of respondents (95% overall) said health workers asked about their mental health. This is encouraging, as ASRHR and mental health are closely linked.
- Ninety-five percent of young people said that a follow-up appointment was set up whilst 93% of young people were referred to a relevant facility.
