

# JOE SLOVO COUNCIL RAPID ASSESSMENT OF ADOLESCENT SEXUAL AND REPRODUCTIVE HEALTH (ASRHR)

JANUARY 2022

## FACT SHEET

This fact sheet is a summary of the findings of the ASRHR Rapid Assessment undertaken in Joe Slovo Council as part of an eight-country study<sup>1</sup> from November 2019 to December 2020. The research aims to strengthen youth-led and focused efforts to promote ASRHR through gender and youth-responsive local governance. Gender Links South Africa conducted the study in 29 Centers of Excellence for Gender in Local Government.<sup>2</sup> In Joe Slovo, the study covered 1 clinic; 40 respondents: 50% young women and 50% young men (see table overleaf). This fact sheet should be read together with the South Africa and the Southern Africa ASRHR Rapid Assessment research pamphlets. Key findings include:

### Accessibility

- Eighty percent of respondents reported being within 10 km of a clinic.
- Responses to whether the clinic opens after school were high at 93%.
- Only 5% of respondents, said that the clinic was accessible during weekends.
- Seventy-three percent of respondents said that the clinic had a comfortable waiting area.
- None of the respondents said that the clinic charges fees for their services.

### Quality of care

- The majority (98%) of respondents said they were treated with respect.
- Ninety-three percent of young people indicated that there was privacy at the clinic.
- Ninety-five percent of respondents said they were treated with confidentiality.
- Only 8% of respondents said that the clinic did not require their parents to be present.

- The majority (93%) of young people indicated that health workers spent sufficient time with them.
- Eighty-eight percent of young people said they received appropriate information. Availability of information is a key component of ASRHR that gives young people a #VoiceandChoice.

### Sexual and reproductive health services

- Over half (54%) of young people requested contraceptives. Seventy-four percent of those who requested contraceptives received them. This relatively high proportion of young people requesting and receiving contraceptives is encouraging as access to contraceptives is key to ensure that ASRH is prioritised.
- Over two-thirds (67%) of young women requested a pregnancy test and all of them received it. Nineteen percent of young women were pregnant at that time.
- At 53%, the overall demand for male circumcision, which has been shown to reduce the spread of HIV and AIDS, is relatively high. It is encouraging that all of those who requested male circumcision received an appointment.
- Only 17% of youth requested PREP while none requested post-exposure prophylaxis (PEP).
- Seventy-seven percent of respondents requested an HIV test. All of those who asked for this test received it.
- A high percentage of respondents (95% overall) said health workers asked about their mental health. This is encouraging, as ASRHR and mental health are closely linked.
- Three-quarters (75%) of young people said that a follow-up appointment was set up whilst 75% of young people were referred to a relevant facility.

<sup>1</sup> Botswana, Eswatini, Lesotho, Madagascar, Mauritius, South Africa, Zambia and Zimbabwe.

<sup>2</sup> Blouberg, Brandwag, D'Almeida, Dana Bay, Emfuleni, Friemersheim, Great Brak, Hartenbos, Herbertsdale, Joburg City-Orange Farm-Region G, Joburg City-Soweto-Region D, Joe Slovo, Kwanonqaba, Lepelle Nkumpi, Midvaal, Mogale City, Molemole, Mossel Bay, Polokwane, Sonskyn Valley, eThekweni Ward 101, eThekweni Ward 11, eThekweni Ward 26, eThekweni Ward 31, eThekweni Ward 34, eThekweni Ward 68, eThekweni Ward 98 (Umkomaas), eThekweni Ward 98 (Umnini).
