

eTHEKWINI Ward 68 COUNCIL RAPID ASSESSMENT OF ADOLESCENT SEXUAL AND REPRODUCTIVE HEALTH (ASRHR)

JANUARY 2022

FACT SHEET

This fact sheet is a summary of the findings of the ASRHR Rapid Assessment undertaken in eThekweni Ward 68 Council as part of an eight-country study¹ from November 2019 to December 2020. The research aims to strengthen youth-led and focused efforts to promote ASRHR through gender and youth-responsive local governance. Gender Links South Africa conducted the study in 29 Centers of Excellence for Gender in Local Government.² In eThekweni Ward 68, the study covered 1 clinic; 41 respondents: 51% young women and 49% young men (see table overleaf). This fact sheet should be read together with the South Africa and the Southern Africa ASRHR Rapid Assessment research pamphlets. Key findings include:

Accessibility

- Eighty-three percent of respondents reported being within 10 km of a clinic.
- Responses to whether the clinic opens after school were high at 88%.
- None of the respondents, said that the clinic opens during weekends.
- Forty-one percent of respondents said that the clinic had a comfortable waiting area.
- The clinic does not charge fees for its services.

Quality of care

- Seventy-three percent of respondents said they were treated with respect.
- The majority (85%) of young people indicated that there was privacy at the clinic.
- Eighty-five percent of respondents said they were treated with confidentiality.

- Ninety percent of respondents said that the clinic did not require their parents to be present.
- Over two-thirds (63%) of young people indicated that health workers spent sufficient time with them.
- Seventy-eight percent of young people said they received appropriate information. Availability of information is a key component of ASRHR that gives young people a #VoiceandChoice.

Sexual and reproductive health services

- Thirty-two percent of young people requested contraceptives. All of those who requested contraceptives received them. This relatively low percentage of young people requesting and receiving contraceptives is worrying as access to contraceptives is key to ensure that ASRH is prioritised.
- Only 14% of young women requested a pregnancy test but it is a concern that none received it.
- There is no demand for male circumcision, despite its significant role in reducing the spread of HIV and AIDS.
- Only 2% of youth requested PREP while none requested post-exposure prophylaxis (PEP).
- Twenty-nine percent of respondents requested an HIV test. However, it is noteworthy that all of those who asked for this test received it.
- None of the respondents said health workers asked about their mental health. This is a concern, as ASRHR and mental health are closely linked.

¹ Botswana, Eswatini, Lesotho, Madagascar, Mauritius, South Africa, Zambia and Zimbabwe.
